

Date:

Wednesday Challenge Form

Group Members: Alyssa, Will, Andy

Problem Statement: Make a product or a tool with few materials that can pick up Ebola golf-balls out of a paper bag without going or touching the paper bag. After the golf has been taken out of the paper bag one has to transport it to a different paper bag which is about 8 to 9 feet away. (also is one drops golf ball they have to start all over again.)

Approach: Will thought of using an idea of an Easter egg dipper but failed to think that the tool has to be longer.

Solution: Our idea but, connect the straws to the pencil for to make it longer.

Lessons Learned: Stick to your second idea.
